#### 7th ASIAN NETWORK FOR CONSUMER (ANCO) WORKSHOP 2013 Promoting Balanced Stakeholder Participation in Standardisation

Kuala Lumpur, 23 April-The 7th Asian Network for Consumer (ANCO) Workshop has been held in Malaysia for strengthening consumer representation and empowering consumer representatives in Asian developing countries and emerging economies in areas related to standards development activities. ANCO plans to achieve the above among others through positive and mutually beneficial engagement with national standards bodies in Asia or their nominated representatives.

## MALAYSIA MOVES A STEP AHEAD TOWARDS GLOBAL ACCEPTANCE

Cyberjaya, 12 April 2013 - Malaysia's non-clinical health and environment safety studies and the reports issued by our GLP compliance laboratories will now be accepted among 40 OECD (Organisation for Economic Co-operation and Development) member countries. In fulfilling its vision to be accepted by Malaysians and recognised by the world, the fully adherent status is an important milestone for the Department of Standards Malaysia (STANDARDS MALAYSIA), which has been one of the appointed Compliance Monitoring Authorities (CMA) verifying the compliance of test facilities in the country, in keeping with the principles of

OECD Good Laboratory Practices. Prior to this, Malaysia was awarded a provisional adherent status under the OECD Mutual Acceptance of Data (MAD) mechanism way back in October 2008 and the fully adherent status was subject to stringent evaluation by OECD Inspectors.

## International standards ensure positive change

Today the international community faces shifting global markets as well as a need to balance remedies to macro-economic challenges with the urgent call for a meaningful response to climate change. In this complex environment, international standards are powerful tools to lead positive change by detailing specifications that can open up global markets, create enabling business environments, spur economic growth and help mitigate and adapt to climate change.

## How the former F1 World Champions embed competitive advantage using BSOL

Are there publications that only members have access to? Provide your new members a list (or link to a list) of publications that they now have access to. What are some upcoming publications and release dates? Publications can be a key draw for new members. Inserting a link in your article lets you track which topics attract the most interest. MERCEDES GP PETRONAS manufactures and runs Formula One (F1) cars and is one of 12 teams competing in the FIA Constructors' F1 World Championship.

## Additional support to financial services thanks to ISO/IEC

Organizations in the financial sector are moving towards more open networks and the provision of e-banking and mobile-banking services, which means they face new challenges from information security threats, such as phishing, malware or cyber-attacks.

To meet these challenges, an adequate information security management system should be adopted by these organizations to prevent and reduce the risks and impacts to financial and customer data and to ensure that an effective level of information security and privacy is offered with their products and services.
