Malaysian Beauty Therapists & Aesthetic Professionals Can Now Be Certified For International Recognition

A Milestone Development in Promoting Standards for Safety & Beauty

Kuala Lumpur, 15 July - IPEC Bureau, today, announced its Beauty Therapist and Aesthetician Certification Scheme (BTaA) at Malaysia's premier beauty industry event Cosmobeaute

Asia, 9th Malaysia International Exhibition Conference on Cosmetics, Beauty & Spa. Accredited by the Department of Standards Malaysia, under MS ISO/IEC 17024, the Scheme was first initiated in the year 2012 to provide national certifications and international recognition for beauty therapists and aesthetic professionals. The certification will help the Beauty Science industry professionals to gain credibility on the strength and merit of their personal qualifications, professional recognition and skill-based competencies. To date, 19 beauty professionals have been certified and 14 fresh applications are already in the process.

Explaining the Trans-Pacific Partnership

THE 18th round of the Trans-Pacific Partnership (TPP) negotiations is set to start in Kota Kinabalu Monday.

The TPP has been in the limelight lately including in Parliament as there have been significant confusion and misunderstanding about the free trade agreement.

Making buildings earthquake-proof - a new ISO standard will help

A new ISO standard will help developing countries assess the safety of buildings before and after earthquakes.

ISO 28841:2013, Guidelines for simplified seismic assessment and rehabilitation of concrete buildings, has been developed specifically for countries that do not have national building codes already in place.

The development and implementation of national building codes relies on having in-depth data on the characteristics of the region (physical, meteorological, geological, seismic, etc.). However, many countries do not have a collection of such data, which can be very resource-heavy.

IEC joins energy leaders at GSEP Summit

At this key international gathering of energy leaders, held on 5-7 June 2013, the IEC, represented by President Klaus Wucherer and General Secretary and CEO Frans Vreeswijk, was able to share insights into the benefits that IEC work brings to the energy solutions of the future. During the summit, Wucherer also participated in a panel discussion on the impact of emerging technologies and innovations on the utilities' current business models. In addition the IEC hosted a session on energy microgrids for disaster resilience and recovery.

The IEC helps keep the power on

Modern life is unthinkable without electricity - it transforms lives. IEC International Standards cover all facets of electrical energy generation, distribution, storage and use; including manufacturing, Smart Grid, smart cities, smart buildings, and e-mobility. They allow millions of components, devices and systems that use or produce electricity or contain electronics to work safely with each other everywhere in the world. A new brochure shows just how the IEC is working when it comes to energy - you may be surprised!
